

UNYKORN IMPACT & INNOVATION REPORT • EDITION 2026 • COMPANION

Namespaces & *Registry*

What the prospectus documents describe, re-derived from the platform's own published code, the DNS inventory and on-chain reads, and labelled accordingly.

UnyKorn LLC September 2026 Edition 1.1

Why it exists

A set of institutional prospectus documents in the estate describes a namespace registry and an asset-registry infrastructure. This companion does not repeat them. It reads what the platform serves, resolves every address it publishes on chain, counts what exists, and states where the documents said more.

UnyKorn LLC does not hold client assets. Where a product requires qualified custody, it is delegated to a qualified custodian named in the client's own agreement, and one account inherited from a predecessor entity still needs re-titling; that item is listed in the identifier register rather than hidden.

Chain read first, document second. Where they disagree, the chain wins and the document is marked superseded.

Global context

The World Bank counts 2.8 billion people who cannot prove who they are online; the WEF's tokenization report puts trusted infrastructure before market access; the BIS insists on integrity. A namespace registry is only useful if a third party can verify an entry without asking the operator, which is the standard every row below is held to.

What we built

The platform page loads a wallet library and lists four flagship campaigns marked as minted in its own code; none of the four addresses is a valid account on Solana mainnet or devnet. Two other mints referenced by the same code do exist on mainnet, with on-chain metadata naming them as campaign tokens for a community site; they are recorded as measured rows. The registry publishes no machine-readable list, so the namespace counts in this family come from the Cloudflare DNS inventory.

READ

Served code

The platform's script, campaigns and addresses parsed as served.

RESOLVE

Solana reads

Every published address checked with `getAccountInfo` on mainnet and devnet; supply and metadata read from the parsed mint.

COUNT

DNS inventory

Zones and hosts from the estate snapshot, classified by what they serve.

HASH

Documents

Every prospectus and guide hashed with SHA-256 and carried as a dated artifact in the identifier register.

How it works

A registry that publishes a signed, machine-readable list would let this chapter be a re-render; until then the platform is labelled IN DEVELOPMENT with the gap named.

What is real today

Every row is a ledger row: the label, the evidence method and the command are in the published ledger.

CAPABILITY	EVIDENCE	STATE
platform.unykorn.org registry counts	The platform page describes a namespace registry; it publishes no registry.json or health.json (both paths return the page itself), so no site, system or apex count from it is used. The counts above come from the DNS inventory instead.	ABSENT
Solana campaign "Sovereign Namespace Roots"	Campaign listed in platform.unykorn.org's code with a mint address that is not a valid account on Solana mainnet or devnet (getAccountInfo returns null, or the string is a placeholder).	IN DEVELOPMENT
Solana campaign "Glacier Protocol (GlacierMint)"	Campaign listed in platform.unykorn.org's code with a mint address that is not a valid account on Solana mainnet or devnet (getAccountInfo returns null, or the string is a placeholder).	IN DEVELOPMENT
Solana campaign "Live The Dream Athlete Fund"	Campaign listed in platform.unykorn.org's code with a mint address that is not a valid account on Solana mainnet or devnet (getAccountInfo returns null, or the string is a placeholder).	IN DEVELOPMENT
Solana campaign "6MW DePIN Mining Infrastructure"	Campaign listed in platform.unykorn.org's code with a mint address that is not a valid account on Solana mainnet or devnet (getAccountInfo returns null, or the string is a placeholder).	IN DEVELOPMENT
Solana mint AFDVbdAK... (Wellspring Tiny Homes, WTH)	SPL Token-2022 mint on Solana mainnet referenced in platform.unykorn.org's code, with on-chain metadata name "Wellspring Tiny Homes" and symbol WTH (metadata URI on \1); supply 1,000,000,000 units, mint authority revoked.	MEASURED

CAPABILITY	EVIDENCE	STATE
Solana mint 75HVhH1q... (Atlanta Mission 5K Reserve, AM5K)	SPL Token-2022 mint on Solana mainnet referenced in platform.unykorn.org's code, with on-chain metadata name "Atlanta Mission 5K Reserve" and symbol AM5K (metadata URI on \1); supply 1,000,000,000 units, mint authority revoked.	MEASURED
Cloudflare estate inventory	16 zones and 322 proxied hosts in the account; the estate inventory classifies the hosts as 120 live with real content, 60 stubs, 121 dead, 12 blocked, 9 dark.	MEASURED
Client and partner names	Rendered only with written consent on file (consent: written, consent_ref). None on file for Edition 2026; no client or partner is named.	GATED

Trust and safeguards

Names of clients and partners are rendered only with written consent on file, and none is. The platform's copy, including a referral table with a commission column, is flagged for the estate sweep; nothing from it is cited as UnyKorn LLC pricing.

Economics

No price is published for registry entries in this edition.

Next phase

Publish a real registry endpoint with signed entries; replace placeholder mint addresses or remove the minted flag; sweep the platform's copy; re-title the inherited account; then this companion becomes a re-render.

Sources. ledger rows NS-*, CH-SOL-*, ENT-CLIENTS, SRC-DOC-*; platform.unykorn.org app.js as served 2026-09-09; Solana JSON-RPC

UnyKorn LLC is a technology and administration service provider. It is not a bank, broker-dealer, exchange, custodian, trustee, transfer agent, appraiser, auditor, investment adviser, money transmitter, or issuer. Nothing in this report is an offer, a solicitation, legal advice, or a promise of any outcome. Client engagements conducted under separate operating entities are not included.

UnyKorn LLC, a Wyoming limited liability company formed July 1, 2026 (Wyoming filing 2026-002019968). Edition 1.1, September 2026. Every figure in this report is bound to a row in the evidence ledger; the whole ledger is published at /report/ledger.json. Anything that could not be resolved to a re-runnable command, an API response, an on-chain read or a hashed document with a date is labelled honestly or omitted. Corrections: hello@blockchainfraud.org.

MEASURED produced by a command, API call or on-chain read recorded in the ledger row and re-runnable today

CAPABILITY code exists, builds, tests pass or a document states it; no production measurement

IN DEVELOPMENT incomplete, with a named remaining gap

GATED complete, blocked on a step outside the software; the blocker class is named, the counterparty is not

TARGET forward-looking; carries a target date **ABSENT** deliberately not built or not on file; the reason is stated

EXTERNAL a third-party fact with URL, retrieval date and a verbatim quote of at most 25 words
